

Camalot Instructions

Parts:

- A. Base featuring camera attachment, tripod attachment, and horizontal bar
- B. Telescoping Arm featuring an end with a swivel knuckle and an alligator clip
- C. (ORC #2 Style) Corner Square

Assembly Steps:

1. Hold the Base (A) with the camera mounting thread and cork pad facing up, with the black box at the end of the horizontal bar coming off to the left. Notice the 3-pronged knob that can be used to secure the horizontal bar in place.
2. Insert the Telescoping Arm (B) into the hole on the black box. The end inserted should be the opposite the end with the alligator clip. The black box has an adjustment knob that tightens and keeps the Telescoping Arm (B) in place.
3. Attach the Corner Square (C) to the alligator clip at the end of the Telescoping Arm (B).
4. The Camalot™ is now assembled and safe to attach a camera. Use the #1/4-20 thread on the Base (A) and the threaded hole at the bottom of most cameras. Underneath the Camalot™ is a large plastic knob that turns the thread into the camera's hole securing it.
