

Hott-Rod™ Rods

These gun barrel depth gage rods are made to fit loosely into various barrels providing non obstructive contact. This is accomplished by jacketing a ridged rod in a tight plastic sleeve and placing a tough nylon tip on the contact end. The other end has a soft rubber finger grip. They are quick and reliable, something every Hott-Rod™ should be.

While the rods are designed with industrial materials using several processes, the most important feature is that they are accurate. We pre-gage all scales to within $\pm.020$ per 24 inch (61 cm) graduated length, and before any rod can be shipped we measure the fabricated length with a fractional/metric scale, as certified by a Master Vernier Caliper in compliance with Federal SPEC-GGG-C-111C and National Institute of Standards and Technology (NIST) test #731-241460. **Every rod is issued a Letter of Certification with a number that is recorded in a ledger providing a traceable document.**

There are two sizes available, one for small bore (22 cal) and the other for larger (30 cal +). Each Rod has both fractional (1/16") and metric (1mm) scales and comes complete in a protective storage tube. Both rods come in the same tube when ordering a set.

#22RHRR-24/61L (For 22 cal) @ \$69.50

#30RHRR-24/61L (For 30 cal+) @ \$79.50

#22/30RHRR-24/61L (SET) @ \$139.00

Note: Due to the fact that normal wear and /or damage occurs to the tip and rod it is recommended to have each Hott-Rod™ recertified periodically. Cost for such is \$25.00 each. Any repairable damage will be billed on a time and material basis.
