

Photo Markers

Photo Markers are useful for labeling points of interest and providing a frame of reference when taking pictures. ORC Forensics has designed and improved the basic fragile (styrene) marker and has included features never before available. Our series of non-glare Articulated Photo Markers (APM) are made of unbreakable polyethylene and are hinged so you can adjust the angle of incline to meet your requirements. This can include standing up straight against an object to laying fully open, flat on the ground. This feature also allows for more compact storage.

Graphics have been designed for optimum reading at greater distances. The large size is visibly recognizable to 100 feet (30 Meters). All selections include a base rule on the bottom edge on each side to provide a dimensional reference and includes easy-to-read Optirectilinear® datums, (Readable Linear Rectangles). Selections include 3 different sizes, Fractional or Metric base rule, and optional colors. The 3 sizes are Extra-Small #05, Medium #20, and Large #40. The medium and large sizes come with a top center hole, used for securing the markers in windy conditions.

Each marker size also has an optional pointer that is directionally rotatable so that you can adjust it to any degree to identify a specific point of interest. This eliminates the need for several of the old “fixed” arrows that are direction limited.

Item Style		Extra Small	Medium	Large
		2 ¹ / ₈ x 2 ³ / ₈ (54x60mm)	3 ⁷ / ₈ x 5 ¹ / ₂ (98x140mm)	5 ⁷ / ₈ x 7 (149x180mm)
