

Tackyons

Not to be confused with Tachyons, those sub atomic particles that are suppose to go faster than light. These particles, or “pellets”, if anything, are anti-techyons. They go nowhere and even inhibit motion. Just stick them on the back of a frame-of-reference measuring rule or I.D. marker and they become stationary on vertical or overhead locations. The best part is they are removable and leave no evidence at the contact point. You can even use the same pellets over until you wear them out. Be gentle.

Since we don't know what you are going to stick them on, we will leave it up to you to devise an appropriate pattern and quantity to use for your applications. Our only suggestion is to gently squeeze the little buggers flat between thumb and finger before applying. They actually like this as they get a little mushy.

Tackyons come in a 1 1/4” Diameter x 2” High clear plastic canister with approximately 500 pellets.

Part Number: 4TACKY-500 @ \$4.00 each

CAUTION

Keep your cool and keep the pellets away from heat. Unlike you or me these pellets relax when heated up and revert back to their collective hive state. They are, after all, only chips off the old block.
